

Water is critical to both mitigating and adapting to the effects of climate change. We at Adani Green Energy Ltd. (AGEL) also consider water as a crucial shared natural resource and its responsible consumption is one of the key drivers of innovation and sustainable economic prosperity of our business.

Protecting and conserving water resources through prudent and effective water management practices and governance systems are a priority for AGEL and integral to our commitment towards water stewardship.

The O&M and project sites under AGEL will demonstrate a commitment to the following objectives:

- Adhere to rules and regulations applicable under water resource.
- Utilize water resources efficiently through effective and economically viable management systems.
- Promote innovation and technology to minimize freshwater withdrawal, focus on water conservation projects through rainwater harvesting wherever possible.
- Identify water-related business risks and opportunities and develop action plans for mitigating the risks.
- Develop and implement water strategies for the business through an effective engagement with stakeholders to increase awareness.
- Measure, monitor, and review the performance related to water stewardship of the organization in accordance with this policy at regular intervals and undertake assurance of the performance before public disclosure.

Responsible and sustainable use of water resources is necessary for improving the sustainability performance of AGEL.

AGEL is committed to the fulfilment of the objectives outlined in this policy.

The policy shall be reviewed annually if necessary for its appropriateness and updated whenever applicable.
